EXPERIENCE

Full Stack Developer Intern

Feb 2025 – Oct 2025

MeowFi (DeFi Startup)

Remote

- Architected a scalable **NPM Workspace Monorepo** integrating **React**, **Node.js**, and **tRPC**, and applied **agentic engineering patterns** (prompt chaining, task decomposition, and evaluator loops) to accelerate implementation, refactoring, and code quality checks across internal packages. [Link](#)
- Engineered complex backend features including scalable RESTful APIs and service-oriented architecture; optimized API interactions via modern tools, reducing requests and improving code quality for robust backend development.
- Developed a robust backend architecture using **Node.js** and **Express**, utilizing **MongoDB** for flexible data persistence to handle complex transaction data and user states efficiently under high load.
- Deployed a documentation hub using **Astro (Starlight)** with a custom GitBook-style interface, authoring over 20+ detailed technical guides to streamline developer and user onboarding. [Link](#)

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript (ES6+), Rust, Solidity Basics, HTML5, CSS3, SCSS

Frontend: React.js, Next.js, Angular, Astro, Tailwind CSS, Redux, ShadCN UI, Vite

Backend: Spring Boot, Node.js, Express.js, Hibernate/JPA, Hono, tRPC, Analog.js, Supabase, Bun

Web3: Viem, Wagmi, Ethers.js, Multicall, Balancer SDK

AI Engineering: Prompt Engineering, Agentic Workflow Design, AI-Assisted Refactoring, AI Code Review

Tools: OpenCode, Cursor, Claude Code, Maven, Docker, Git, Linux, Nx, Biome, Postman, Figma, PostgreSQL, MongoDB

PROJECTS

PrepZone | Angular, Node.js, Express, MongoDB

[Link](#)

- Built a scalable **EdTech assessment platform** featuring secure Google OAuth authentication and a comprehensive admin dashboard capable of managing a repository of **700+ questions** to auto-generate adaptive mock tests.
- Optimized application performance utilizing **Angular Signals** and **Server-Side Rendering (SSR)** to achieve sub-second load times, while implementing granular Role-Based Access Control (RBAC) for secure user workflows.

ReqQuest | TypeScript, Analog.js, tRPC, Supabase

[Link](#)

- Developed a robust browser-based **API client** serving as a lightweight Postman alternative, enabling users to inspect REST requests, manage custom headers, and parse real-time responses with low latency.
- Implemented the **Spartan Stack** (Supabase, Analog.js, tRPC) to enforce strict backend typing, while applying **prompt-engineered agent workflows** for scoped refactors, API contract checks, and faster debugging cycles.

ContextLens | SvelteKit, Bun, Convex, Groq, Tailwind CSS [Link](#)

- Engineered a long-document intelligence platform with backend service development, RESTful APIs, and live hallucination detection to evaluate LLM reliability, supporting code quality and robust testing workflows.
- Built an advanced analytics dashboard featuring a **positional bias heatmap** for 'lost-in-the-middle' detection and a noise injection lab to stress-test model robustness against irrelevant context blocks.

EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (Affiliated to GGSIPU)

Nov 2022 – Jul 2026

B.Tech in Electronics and Communication Engineering

CGPA: 8

ACHIEVEMENTS

- Secured **Top 5 Finalist** status in the **LiveTheCode 2.0 Hackathon** (250+ teams) by building a production-ready full-stack application within 48 hours, demonstrating rapid prototyping and effective teamwork under pressure.
- Maintained over **1000+ GitHub contributions** across open-source and personal projects, showcasing a disciplined daily commit streak and a strong commitment to continuous learning and collaborative development.
- Delivered **5+ freelance projects** including e-commerce platforms and dashboards, receiving high client ratings for optimizing frontend performance and ensuring secure, scalable enterprise architectures utilizing **Spring Boot** and **Node.js**.
